That would be the ideal situation! We will definitely do our best. I'll talk to the lab tomorrow and see if we can get a 24hr TAT.

See you on site tomorrow.

Jackie

Also if you can get a fast turnaround time on the Phase 3 test pit samples, hopefully the results will show that no liner needs to be ordered to cover Phase 3.

Thanks!

Joyce

Hey Eric and Joyce,

We're good to go to get sampling done for Phase 3 tomorrow (test pit below where the drums were located to the until soil is below 100ppm, and confirmation sampling on all other walls and floor).

Are there any other data gaps that you are aware of at this point that we could sample tomorrow while we have ACT's excavators on site? Given that we have sampled all of the stockpiles as well as test pits representing Phase 1 waste, all of the roll-offs and test-pits representing Phase 2B waste, and test pit samples of Phase 2A waste, Phase 3 should be all we have left. Do you agree?

See you tomorrow on site. 8 am start time.

Cheers,

Jackie Rowley

Joyce,

Emily took a composite sample from those Phase 1 stockpiles on January 25th. We went ahead and took discrete samples from the Phase 1 stockpiles yesterday and sent them off to Test America. They are being analyzed for TCLP as per Eric's recommendation.

Cheers,
Jackie

Sounds good to me. The only thing that comes to mind at the moment is one of the piles in Phase 1 had some elevated chromium. I think Emily sampled it. I don't recall whether there was a tclp sample for that pile. If that pile is taken off-site for disposal, we should make sure it has been tested for tclp. I will swing by tomorrow but go ahead and get started without me.

Thanks!

Joyce
